Art Unit: 3749

DETAILED ACTION

Priority

Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Specification

The disclosure is objected to because of the following informalities:

On page 9, line 26, change "th" to -the--.

Appropriate correction is required.

Claim Rejections - 35 USC § 112

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 1-16 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. In particular, in independent claims 1 and 14, the applicant discloses a heat resistant, heat transmitting and heat dispersive shroud, it is unclear how a shroud

Application/Control Number: 10/017,238

Art Unit: 3749

material can be both heat resistant and heat transmitting at the same time. The specification, which also supports this limitation, does not define how this is possible.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-3 and 5-7 are rejected under 35 U.S.C. 102(b) as being anticipated by Overbergh et al (5,482,087). Overbergh et al discloses a method of protecting a pipeline, in which a zone of an elongate tubular article (2) is applied with a flexible (heat shrinkable) shroud material (8) wherein the area outside of the peripheral of the shroud is uncoated (SEE Figure 1), heat is applied to the outside of shroud (8) by a gas torch (column 6, line 31) and causes heat to be transmitted through the shroud material to an adhesive coating (10) to the pipeline. In regards to claim 3, the shroud material is a heat recoverable fabric (ie: heat conductive material).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Gregory A. Wilson whose telephone number is (703) 308-1239. The examiner can normally be reached on 7 am - 4:30 pm EST.
